

AT91F_PDC_Close

AT91F_PDC_Open

AT91F_PDC_DisableTx

```
graph LR; A[AT91F_PDC_Close] --> C[AT91F_PDC_DisableTx]; B[AT91F_PDC_Open] --> C;
```

The diagram illustrates a functional dependency where both the 'Close' and 'Open' operations of the AT91F_PDC module lead to the 'DisableTx' operation. The 'Close' and 'Open' boxes are white with black borders, while the 'DisableTx' box is gray with a black border. Blue arrows indicate the flow from the left boxes to the right box.
